From the Desk of Chairman

Dear Readers,

At the very outset, I extend my heartfelt wishes to each one of you for a joyful, healthy, prosperous, and safe New Year 2026. May the year ahead bring renewed energy, success, and fulfillment in all your endeavours.

I am confident that our readers appreciated the 28th issue of our chapter's e-magazine, "*Kaleidoscope*." With immense pleasure, we now present the 29th issue for the period January–March 2026. This publication has evolved into a platform for shared learning and knowledge exchange, and we believe the journey has just begun. The time is now ripe to further enhance its content, relevance, and presentation. I sincerely invite your active cooperation in the form of insightful articles, case studies, and valuable suggestions to make this initiative even more meaningful.

As we move forward, it is imperative that we collectively focus on meeting and exceeding customer expectations while strengthening our resilience in an increasingly competitive environment. Various quality initiatives such as WCM and Safety Circles, championed by the QCFL fraternity, continue to play a vital role in driving productivity, efficiency, and continuous improvement. Let us all act as ambassadors of quality and foster a culture of excellence across our member organizations, thereby contributing to the creation of more robust and future-ready workplaces.

Together as a team, we must intensify our efforts to propagate and implement quality concepts across MSMEs, industries, and institutions.

I would also like to draw your attention to key upcoming initiatives by QCFL. The COE Division, Secunderabad, has introduced a prestigious new recognition—the *Indian TQM Award: SAMPOORN*, with the last date for submission of entries being 5th May 2026. Additionally, a 5S Conclave is scheduled to be held in Varanasi on 12th June 2026. The chapter has already shared the relevant brochures with all member organizations. I strongly urge all our member units to participate wholeheartedly in these initiatives. For any clarification or support, you may kindly reach out to Sri Sunil Srivastava, COO (TQM), or Sri V.K.B. Das, COO (Training), QCFL.

Our chapter currently has a strength of 290 Life Members and 54 Institutional Members. While this is encouraging, there is significant scope for further growth. I urge each one of you to contribute towards strengthening our community by enrolling more individual and institutional members.

Simultaneously, we must increase our focus on organizing more training programs, conclaves, and thematic melas to enhance knowledge dissemination and engagement.

As we embark on another chapter of our journey, let us reaffirm our commitment to excellence, collaboration, and continuous improvement. With renewed enthusiasm and collective effort, I am confident that we will achieve greater milestones in the days ahead.

Let us move forward together—stronger, smarter, and committed to quality.

With warm regards,

Biswaranjan Palai

Chairman,
QCFL Rourkela Chapter &
ED-Works,
SAIL/RSP, Rourkela

IN FRAMES

Glimpses of various events held during FY 25 – 26 / Q4 period

A) Training programs

Workshop on 7QC Tools in SLM Technology, Kalunga, Rourkela in Jan'26

Workshop on QC & PST in Gopalpur Ports Ltd., Gopalpur in March'26

B) Teams at TQM Summit in Pune

TQM Summit organized by CoE, QCFI during Feb 05-06, 2026 in Pune.

7 teams from Vedanta Ltd., Jharsuguda presented case studies and awarded in this summit held in Pune

Report on NCQC-2025 held during Dec.19-21. 2025

Teams from various sections of industry participated in NCQC-2025 and on various concepts e.g. QC, Kaizen (Even multi-Kaizen case studies), Six sigma, 5S etc. Improvement has been seen in both report writing and presentation. General arrangement for foods, KIT distributions etc. were very good and went on very smoothly. The organizers of various events, Delhi chapter and QCFI deserve full appreciation for it. Not only this, all the chapters in some way or other had involved themselves to make it a grand success. *The leader "ED(QCFI)" deserves a special praise for it. Kudos to him.*

Statistics are as -

HABITS OF HIGHLY PRODUCTIVE PEOPLE

- | | |
|--------------------------|---|
| 01. TIME BLOCKING | : Schedule specific work periods – Manage it like a precious asset |
| 02. CLEAR PRIORITIES | : Identify top three tasks daily |
| 03. DISTRACTION CONTROL | : Stay focussed and avoid distractions |
| 04. DELEGATION | : Assign low value tasks |
| 05. EARLY START | : Work during peak focus hours |
| 06. TASK BATCHING | : Group similar activities |
| 07. REGULAR BREAKS | : Prevent burnout cycles |
| 08. REVIEW SYSTEMS | : Track performance weekly |
| 09. MINIMAL MULTITASKING | : Maintain deep work focus |
| 10. GOAL ALIGNMENT | : Connect task to objectives – Pursue your goals with relentless effort |
| 11. ENERGY MANAGEMENT | : Work with natural rhythms |
| 12. CONTINUOUS LEARNING | : Constantly improve skills and adapt |

CHAPTER MUSINGS

❖ PERIOD: January - March'26 / Q4 Period

Following activities were carried out during FY 2025– 26 / Q4 by QCFI, Rourkela chapter as given below –

1) Institutional & Individual Life Membership

- ✓ Total strength of Individual Life Members is **290** whereas no. of Institutional Members is **54**.

2) Chapter Meeting

- ✓ Monthly chapter meeting held regularly. Total 03 meetings during Q4 period.

3) QCFI Promotional Activities

Visited following organizations –

- ✓ Utkal Metalliks, Kalunga on 23.01.26
- ✓ Gopalpur Ports Ltd., Gopalpur on 20.02.26

Total 2 visits were made during the said period.

4) Sale of QCFI Published Books

- ✓ Sold worth Rs.14500/- books during the period.

5) Training program

- An awareness program on K.T. organized in TRL Krosaki Refy. Ltd., Belpahar by Sri Rahul Sahu on 15.01.26. 14 participants attended.
- A workshop on 7 QC tools organized during Jan19-20, 2026 in SLM Metals Pvt. Ltd., Kalunga. 15 participants attended.
- Awareness program on K.T. organized in QCFI chapter office at Rourkela on 15.02.26 wherein 10 participants attended.
- A Three Days workshop on QC Concepts/PST with exercises organized in Gopalpur Ports Ltd., Gopalpur during March 18-20, 2026. 16 participants attended it.
- A doubt clearing session organized in Rourkela chapter office on 29.03.26 wherein 10 participants attended. Topic was QC/Kaizen report writing and Presentation.
- **Total 05 programs of 08 days duration organized.**

6) TQM Summit

- ✓ 4th TQM summit organized by CoE, QCFI Secunderabd in Pune during Feb 05 – 06, 2026
- ✓ Program was inaugurated by Sri Shyam Singh, Plant Head, Hyundai Motors, Pune whereas Valedictory function was presided over by Sri Sanjeev Nimkar, ED & CEO, RR Infrastructures Pvt. Ltd., Pune.
- ✓ 378 delegates and team members from 33 organizations & institutions from 8 states participated in it.
- ✓ 20 expert sessions were held on various topics like TQM - strategy, best practices, journey, experience sharing, QCFI's role in TQM promotion across the country etc.
- ✓ Many eminent speakers drawn from various industries including QCFI H.Q. spoke on this occasion.
- ✓ 8 teams from Vedanta Ltd., Jharsuguda participated in it and 7 teams won Gold Award whereas 1 team got silver award.
- ✓ Hony. Secretary, QCFI, Rourkela chapter also participated as delegate.

7) Misc. Activities

- ✓ Chapter's quarterly e-magazine (Q3/FY 25-26) was also published in Feb'26.
- ✓ An article on "Quality Rooted in Indian Organizations" was published in In-house journal of QCFI on the occasion of TQM summit in Udaipur during Feb.06-07, 2026.
- ✓ Similarly, another article on "Significance of Statistical analysis in Quality Management System" was published in In-house journal of Quality Circle India (February – March'26) issue.
- ✓ One chapter official attended the **TQM summit program in Pune held in Feb'26.**
- ✓ 50 Umbrellas were distributed among poor students in Oct'25.

▪ Chi Square Test (χ^2)

Chi Square test

The **Chi-square (χ^2) test** is a widely used statistical method for analyzing **categorical data**—that is, data grouped into categories rather than measured numerically. It helps determine whether there is a **significant difference between observed and expected frequencies and the expected frequencies in one or more categories**.

01. The Genesis (History)

The test was developed by Karl Pearson in 1900. Before Pearson, researchers often assumed that all biological and social data followed a normal distribution. Pearson's Chi-square test was revolutionary because it provided a formal mathematical way to measure "discrepancy"—essentially giving scientists a tool to prove that their observations didn't just happen by accident. This test became a cornerstone of modern *Statistics and Quality control*. It is closely associated with:

- Ronald Fisher, who expanded hypothesis testing frameworks
- The development of inferential statistics in the early 20th century

02. What is the Chi-square Test?

The test evaluates whether the variations in the data are due to chance or if there is a specific relationship between the variables. Since it is non-parametric, it does not assume that data follows a normal distribution (the "bell curve").

It compares:

- **Observed values (O)** → what one actually sees in data and
- **Expected values (E)** → what one would expect under a hypothesis

Formula

$$\chi^2 = \sum \frac{(O-E)^2}{E}$$

Where:

O = Observed frequency & **E** = Expected frequency

And Expected Frequency

$$(E) = \frac{(\text{Row Total} \times \text{Column Total})}{\text{Grand Total}}$$

03. Types of Chi-Square Tests

a) Goodness-of-Fit Test

Checks whether observed data fits a specific distribution.

Example: *Does a die roll follow a uniform distribution?*

b) Test of Independence

Determines whether two categorical variables are related.

Example: *Is there a relationship between?*

- ✓ Gender and product preference?
- ✓ Training and defect rate in quality management?

c) Test of Homogeneity

Compares distributions across different populations.

Example: *Do different factories have the same defect distribution?*

At its core, the chi-square test answers questions like:

- ✓ Goodness of Fit: Tests if a sample data matches a population with a specific distribution
- ✓ Test of Independence: Tests whether two categorical variables are related to each other

04) Key Assumptions

To get accurate results, the Chi-square test usually requires:

- Categorical data: The data must be in groups (e.g., Yes/No, Red/Blue/Green).
- Independence: Each observation must be independent (one person's choice doesn't affect another's).
- Sample size: Usually, the expected frequency in each "cell" of the data should be at least 5. If the numbers are too small, the test becomes unreliable. Sample size thus should be reasonably large.

05) Chi-square test can be used for:

- Defect pattern analysis
- Process comparison
- Supplier quality evaluation
- Customer complaint categorization

Example: Checking whether defect types are **random or systematic**

06) Advantages

- Simple and widely applicable
- Works well with categorical data
- No assumption of normal distribution

07) Limitations

- Sensitive to sample size.
- Not suitable for small expected frequencies
- Does not indicate strength of relationship (only existence)

08) Steps to Perform a Chi-Square Test with a case study

a) Hypotheses:

- **For Independence:**
 - ✓ H_0 : The variables are independent (no association).
 - ✓ H_a : The variables are not independent (there is an association).
- **For Goodness-of-Fit:**
 - ✓ H_0 : The observed distribution matches the expected distribution.
 - ✓ H_a : The observed distribution does not match the expected distribution.

b) Determine Expected Frequencies:

- For independence: Use the formula:
 $E_{ij} = (\text{Row Total}) \times (\text{Column Total}) / \text{Grand Total}$ where E_{ij} is the expected frequency for cell i, j .
- For goodness-of-fit: The expected frequencies come from the theoretical distribution or proportion.

c) Compute the Chi-Square Statistic:

- Use the formula: $\chi^2 = \sum [(O_i - E_i)^2 / E_i]$

d) Determine Degrees of Freedom (d.f.):

- **For independence:** $df = (\text{Number of Rows} - 1) \times (\text{Number of Columns} - 1)$
- **For goodness-of-fit:** $df = (\text{Number of Categories} - 1)$

e) Find the Critical Value or p-Value:

- Use a Chi-Square distribution table or statistical software.
- Compare the calculated χ^2 to the critical value at your chosen significance level (α).

f) Make a Decision:

- If calculated $\chi^2 >$ critical value: Reject H_0 .
- Otherwise, fail to reject H_0 which means Accept H_0 .

09) Case Example:

MD, SPC solutions, Rourkela wants to know if there is an association between **gender** and **preference for a type of beverage** (Tea or Coffee). The company surveys 100 people, and the results are summarized in the table below:

	Tea	coffee	Total
Male	30	20	50
Female	10	40	50
Total	40	60	100

Step 1: State the Hypotheses

- Null Hypothesis (H_0): There is no association between gender and beverage preference i.e. they are independent.
- Alternative Hypothesis (H_a): There is an association between gender and beverage preference i.e. they are not independent.

Step 2: Calculate Expected Frequencies

The expected frequency for each cell is calculated using the formula:

$$E_{ij} = (\text{Row Total}) \times (\text{Column Total}) / \text{Grand Total}$$

So, expected frequency thus calculated is given in the table below –

	Tea	coffee	Total	
Male	30	20	50	f ₀
	50*40/100=20	50*60/100=30	50	f _e
Female	10	40	50	f ₀
	50*40/100=20	50*0/100=30	50	f _e
Total	40	60	100	f ₀
	40	60	100	f _e

Step 3: Compute the Chi-Square Statistic

The chi-square statistic is calculated using the formula: $\chi^2 = \sum [(f_{0ij} - f_{eij})^2 / f_{eij}]$

$$\chi^2 = (30-20)^2/20 + (20-30)^2/30 + (10-20)^2/20 + (40-30)^2/30$$

$$= 5.00 + 3.33 + 5.00 + 3.33 = 16.66$$

Step 4: Determine Degrees of Freedom

The degrees of freedom (df) for a Chi-Square Test for Independence is:

$$df = (\text{No. of Rows} - 1) \times (\text{No. of Columns} - 1) = (2 - 1) \times (2 - 1) = 1$$

Step 5: Find the Critical Value or p-Value

Using a chi-square distribution table or software, find the critical value for df=1 at a significance level of $\alpha=0.05$ i.e. confidence level of 95%

- Critical value: **3.84**

Compare $\chi^2_{\text{original}} = 16.66 > \chi^2_{\text{critical}} 3.84$, thus we reject the null hypothesis H_0 .

Alternatively, calculate the p-value using software or a table for χ^2_{original} (here p value < .0001).

Step 6: Conclusion

The p-value is less than 0.05, or the chi-square statistic exceeds the critical value. Therefore:

- **Conclusion:** Reject H_0 . *There is a significant association between gender and beverage preference.*

■ QUIZ TEST

01. Lean manufacturing could be defined as:-

- Workers eating less during work hours
- A production process which is very slow and wastes time
- Techniques for motivating workers to produce more
- Techniques used in manufacturing to reduce waste in all its forms**

02. Which of the following would be an example of Lean Manufacturing?

- Buying the latest equipment to increase output
- Producing a greater variety of goods
- Making smaller quantities of goods than previously.
- Holding very low stock levels – JIT**

03. ----- is a tool for monitoring how lean principles are working in an organization

- Poka-yoke
- Andon
- Gemba
- Lean Audit**

04. Which of the following is not a goal of lean audit?

- Improve overall efficiency
- Increase waste**
- Reduce waste
- Lower production costs

05. Which lean philosophy says that things must be done right the first time and every time?

- Gemba
- Right First Time**
- Poka-Yoke
- Kanban

06. SMED aims to convert as many changeover steps as possible to external elements

- True**
- False

07. Which of the following is not a benefit of SMED?

- Lower manufacturing cost
- Smaller lot sizes
- Lower inventory levels
- Larger lot sizes**

08. Which of the following is not a reason for organizations switching to agile manufacturing?

- Constant technological development
- Increasing complex supply chain
- Higher customer standards
- Increased manpower**

09. Which of the following is not a common idea between lean manufacturing & agile manufacturing?
- a) Productivity
 - b) Empowering people
 - c) Response to customer demands
 - d) **Reduction in waste**
10. Agile manufacturing focuses on a bottom-up approach
- a) **True**
 - b) False
11. Which of the following is not an advantage of the bottom-up approach of agile manufacturing?
- a) Shop floor workers have a voice
 - b) **Low engagement**
 - c) High value products and processes
 - d) Seamless flow of ideas
12. Which philosophy tells us that we need to go out of the office and visit the plant floor where the real action occurs?
- a) Benchmarking
 - b) FMEA
 - c) **Gemba**
 - d) Andon
13. JIT is a long-term approach to process improvement
- a) **True**
 - b) False
14. Which of the following is not a disadvantage of JIT?
- a) Danger of lost sales
 - b) Danger of disrupted production
 - c) Less time for quality control
 - d) **Greater flexibility**
15. Which of the following terms in the seven types of wastes categorized by Ohno considers the movement of product between manufacturing processes as no value-addition task, expensive and can cause damage to the product?
- a) Overproduction
 - b) Waiting
 - c) **Transportation**
 - d) Excessive inventory
16. Which of the following terms in the seven types of wastes categorized by Ohno considers the waiting of one process to begin while the other one gets over?
- a) Overproduction
 - b) **Waiting**
 - c) Transportation
 - d) Excessive inventory
17. Who can develop a poka-yoke device?
- a) Founder
 - b) Co-Founder
 - c) Manager
 - d) **Anyone in the organization**
18. An operator in a manufacturing company is faced with the challenge of using a poka-yoke device. It is difficult to operate and requires continuous attention. What can you infer from the following scenario?
- a) The operator must read the operation manual
 - b) The operator must be dismissed from service
 - c) **Poka-yoke device should be easy to install and usable to all**
 - d) Operator is lacking operational skills
19. Poka-yoke _____ an error as soon as it is being made and _____ it from reaching the next operation
- a) Promotes, promotes
 - b) **Detects, prevents**
 - c) Prevents, detects
 - d) Promotes, prevents
20. The use of electrical sensors to activate warning signals is an example of _____
- a) **Poka-yoke mechanism**
 - b) Use of electronics
 - c) Use of electrical devices
 - d) Inform the police
21. Which of the following is not an example of use of poka-yoke in business processes?
- a) **Use of sensors in a car**
 - b) Checklists
 - c) Color coding on products
 - d) Color coding in the work area
22. _____ and _____ are two major types of inspection for detecting errors
- a) **Sampling inspection, 100% inspection**
 - b) Sampling inspection, 99% inspection
 - c) Sampling inspection, 98% inspection
 - d) Sampling inspection, 97% inspection
23. Auto shut off on iron is an example of a poka-yoke mechanism
- a) **True**
 - b) False
24. A car won't start unless transmission is in neutral/park position. This is an example of Poka-yoke mechanism
- a) **True**
 - b) False

25. What do Yokeru and Poka mean respectively?

- a) **Avoid, inadvertent errors**
- b) Inadvertent errors, avoid
- c) Inadvertent mistakes, avoid
- d) Inadvertent errors, inadvertent mistakes

Please go through the Books on PST, QC Concepts & Implementation, Practical Guide book on Five S, Six sigma, Lean manufacturing and Question Bank published by QCFI, Secunderabad for more clarity.

KNOWLEDGE JUNCTION

■ The Duck or the Chicken - The Secret to Versatile Leadership

I recently came across an image that sparked a powerful realization. What makes these two images so compelling is that they are not about “**Right vs. Wrong**” — they are about “**Context vs. Context.**” The most **effective leader** is not always the one at the front or always the one at the back. It is the one who understands **when to change position.**

In leadership theory, this is known as **Situational Leadership Theory**, developed by Paul Hersey & Ken Blanchard, which emphasizes adapting leadership style based on the needs of the team and the situation.

“**Duck vs Chicken**” story is a very creative and powerful way to explain this concept but **not an original theory** by Hersey & Blanchard. It is a **modern interpretation / metaphor** inspired by their work on Situational Leadership.

01. Leading from Behind (The Chicken) 🐔

Empowerment • Trust • Safety

When a team is experienced, capable, and confident, they don’t need a constant pathfinder — they need **space to lead**. By positioning yourself behind:

- You empower ownership
- You build confidence
- You encourage innovation

You are still leading — but as a **guardian of direction**, ensuring no one is left behind and the larger vision stays intact.

02. Leading from the Front (The Duck) 🦆

Clarity • Direction • Momentum

When the team faces uncertainty — a new challenge, tight deadlines, or unfamiliar territory — they need **visible leadership**. By stepping forward:

- You provide clarity
- You absorb pressure and risk
- You set the pace and direction

You become the one who says: “**Follow me — I’ll break the path.**”

03. The Leadership Balance

- If you are always the **Duck**, you may unintentionally limit your team’s growth.
- If you are always the **Chicken**, your team may drift without direction.

True leadership lies in reading the moment:

- ✓ When your team is **learning** → Lead from the front
- ✓ When your team is **growing** → Lead from behind

04. The Real Insight

- ✓ A good leader does not stay fixed in one role.
- ✓ A great leader has the **awareness, humility, and emotional intelligence** to shift — to guide, to step back, to step forward — as needed.

The Goal

- ✓ Don't choose between the Duck or the Chicken.
- ✓ Learn to be both.

International Women's Day 2026

- ✓ Official Theme of UN is "**Rights, Justice, Action for ALL Women and Girls**" which focuses on legal rights, equal access to justice, and real-world implementation and calls for dismantling barriers like discriminatory laws and harmful social norms.
- ✓ This is celebrated on 8th March every year.
- ✓ Popular Campaign Theme (Widely Used by Organizations) is "**Give To Gain**" and emphasizes support, mentorship, sharing resources, and collective progress which means, when society invests in women, everyone benefits.
- ✓ Gender equality is not a goal—it's a responsibility. *So support a woman today to strengthen society tomorrow.*
- ✓ *It is widely believed that true progress lies in creating systems where women not only participate but **lead, thrive, and transform the society**. Let us thus move beyond intent and deliver **impact through inclusive policies, equitable opportunities, and sustained action**.*

World Water Day 2026

- ✓ Theme this year is - Water for all people: Equal rights and opportunities
- ✓ Water sustainability is not optional—it is essential for business, communities, and future generations.
- ✓ Together, let us drive measurable action to conserve and protect our most vital resource—water.
- ✓ Women must be equitably represented at all levels of water leadership.

International women's Day & World Water Day celebrated worldwide in March'26

ANSWER TO THE QUIZ

Sl. No.	01	02	03	04	05	06	07	08	09	10
Answer	D	D	D	B	B	A	D	D	D	A

Answer	A	A	A	A	A					

JARA HAT KE

"I'm naming you VP of Revolution, Action and Edgy Thinking ...
on one condition ...
that you promise not to change anything."

I asked for a confidential list of low-value employees to fire. Why did you use AI? It put my name at the top.

- टीचर : "संगठन में ही शक्ति है" का एक अच्छा सा उदाहरण दो?
- छात्र : जब में एक बीड़ी हो तो टूट जाती है और पूरा बंडल हो तो नहीं टूटता.
- डाक्टर : घबरा मत पांडे, बहुत छोटा ऑपरेशन है!
- रोगी : Thank u doctor, लेकिन मेरा नाम पांडे नहीं है।
- डाक्टर : मुझे पता है, पांडे मेरा नाम है....

- Teacher : Kids, what does the chicken give you?
- Daniel : Meat!
- Teacher : Very good! Now what does the pig give you?
- Daniel : Bacon!
- Teacher : Great! And what does the fat cow give you?
- Daniel : Homework!
