

KALEIDOSCOPE

Volume 01

April – June 2026

Issue 30

B – 56, Sector – 20, Rourkela – 769005, Odisha
Mobile No.: 9437245547 / 8895501691, E-Mail: qcfi.rklchapter@gmail.com

From the Desk of Chairman

Dear Readers,

It is with great joy that I welcome you to the **30th edition of Kaleidoscope!** Each issue is a reflection of our collective spirit, and I hope the last edition left you both informed and inspired.

We are now preparing for the **34th CCQC-2026**, scheduled for **September 26-27, 2026 at BPUT, Odisha, Chhend, Rourkela**. With the brochure already shared, excitement is building, and we anticipate a strong turnout. Last year's convention was a remarkable success, with **227 teams and 1,100 participants from 24 organizations**. This year, we aim to raise the bar even higher and create an event that will be remembered for its energy, learning, and collaboration.

Our chapter thrives on **mutual learning and shared growth**. *Kaleidoscope* is not just a magazine—it is a platform for exchanging ideas, experiences, and best practices. I invite each of you to contribute your thoughts, articles, and insights. Together, we can make this publication a true mirror of the Rourkela chapter's knowledge and creativity.

The path to lasting success lies in cultivating a **quality-driven culture**. By applying proven concepts and tools, we can solve challenges, foster innovation, and achieve sustainable breakthroughs. Our faculty continues to stand ready to support organizations with **training, capability building, and mentoring**.

This quarter, we are delighted to welcome **one new institutional member, bringing our total to 55**. Congratulations to all who made this milestone possible! With events like our **Convention/Conclave**, we remain committed to expanding both membership and training programs, ensuring that our chapter grows stronger with each passing year.

We also proudly joined the world in celebrating **International Yoga Day on June 21, 2026**. Yoga reminds us that progress is not only about professional achievements but also about **personal well-being, balance, and harmony**. May its practice inspire each of us to lead healthier, more mindful lives.

As we move forward, let us remember: *Quality is not just a tool, but a philosophy; learning is not just a process, but a journey; and unity is not just a value, but our greatest strength*. Together, we can build a chapter that stands as a beacon of excellence, innovation, and harmony.

With warm regards,

Biswaranjan Palai

Chairman,
QCFI Rourkela Chapter &
ED-Works,
SAIL/RSP, Rourkela

CHAPTER MUSINGS

❖ PERIOD : April – June'26

Following activities were carried out during FY 2026– 27 / Q1 by QCFI, Rourkela chapter as given below.

1) Institutional & Individual Life Membership

- ✓ Gopalpur Ports Ltd. (Unit of Adani Ports) became the permanent institutional members totaling to Institutional members strength of **55**.
- ✓ Life members strength is **290**.

2) Chapter Meeting

- ✓ Monthly chapter meeting held regularly. Total 03 meetings during Q1 period.

4) QCFI Promotional Activities

Visited following organizations –

- ✓ BPUT, Odisha, Rourkela in April'26 for membership, QC activities & CCQC-26
- ✓ NSPCL, Rourkela for QC activities & CCQC-26 in May'26

3) Sale of QCFI Published Books

- ✓ Sold worth Rs.18800/- books during Q1 of FY 26-27.

4) Training program

- 1 day program tips for presentation on 24.05.26 in Chapter office, Rourkela.
- 1 day program on preparation for Knowledge Test on 14.06.26 in Chapter office, Rourkela.

5) Misc. Activities

- ✓ Chapter's quarterly e-magazine (Q4/FY 25-26) was also published in Apr'26.
- ✓ Audit Report for the year '25 – 26 was finalized as per QCFI guidelines and duly certified by Chapter auditor, was sent to QCFI in July'26.
- ✓ Our Vice-Chairman, Sri P K Sahoo, CGM (L&D), SAIL/RSP was given farewell on his superannuation and thus leaving the city.
- ✓ Payment issue of CCQC-25 related to Tata Steel Ltd. & Aditya Aluminium were settled.
- ✓ Our two officials from JSW Steel Ltd. Barbil became JDP qualified.

QCFI Rourkela chapter organizes 34th CCQC-256 in BPUT, Odisha, Chhend, Rourkela on 26th & 27th September'26

**For More Information, please see either QCFI Web site or
Contact Rourkela chapter office**

Mobile: 9437245547 / 8594939563 / 8895501691

E-Mail: qcfi.rklchapter@gmail.com

ANSWER TO THE QUIZ

Sl. No.	01	02	03	04	05	06	07	08	09	10
Answer	B	B	C	B	B	B	A	A	A	D
Sl. No.	11	12	13	14	15	16	17	18		
Answer	B	D	C	C	C	C	B	A		

■ SCATTER DIAGRAM

What is a Scatter Diagram:

A scatter diagram (scatter plot) is a statistical graph that shows the relationship between two numerical variables by plotting data points as dots on an x-y coordinate plane. It helps to identify correlations, trends, and patterns, making it a powerful tool for analysis in the fields like business, science and engineering.

- Graphical representation of relationship between two variables
- It can be between a Cause & Effect or between two causes
- It also reveals the nature of relationship between two variables and their approximate strength
- Dr. Buxton developed printed graph paper which led to use of Scatter diagram
- In 1837, JFW Herschal used this diagram
- In 1950s, Dr. K Ishikawa popularized this diagram

Key Features of a Scatter Diagram

- **Two variables:** One on the X-axis (Independent/explanatory) and the other on the Y-axis (Dependent/response). Each observation is represented by a dot.
- **Association types :**
 - Positive correlation → values rise together.
 - Negative correlation → one rises as the other falls.
 - No correlation → random scatter.
- **Form :** Linear (Positive or Negative), Nonlinear (curved), or no clear pattern.
- **Strength :** Strong, moderate, or weak depending on how tightly points cluster.

Uses of Scatter Diagrams

- **Correlation analysis :** Identifying whether variables move together.
- **Trend detection :** Spotting upward or downward patterns.
- **Prediction :** Adding regression lines to forecast outcomes.
- **Problem-solving :** Common in Quality control to find cause-effect relationships.

How to Create a Scatter Diagram

01. Collect Data - Gather paired values for two variables which we want to analyze.

Identify *Independent variable* (x-axis), *Dependent variable* (y-axis) and Record observations in a table

02. Set Up Axis - Draw or use software to create x- and y-axis.

- i) Label axis with variable names and units
- ii) Choose scales that fit all data values

03. Plot Data Points - Mark each observation as a dot on the graph.

- i) Place dots at (x, y) coordinates
- ii) Do not connect dots

04. Analyze Patterns - Look for trends, correlations, or clusters.

- a) Check direction (positive/negative)
- b) Assess form (linear/nonlinear)
- c) Evaluate strength (strong/weak)
- d) Optionally add a regression line

Types of Correlation

- ✓ Correlation describes Strength and Direction of the relation ship between two quantitative variables
- ✓ Correlation coefficient (r) ranges from -1 to +1.

01. Positive correlation	02. Negative correlation	03. Zero correlation
• As one variable increases (Independent), the other variable (Dependent) also increases (Direct Relationship)	• As one variable increases (Independent), the other variable (Dependent) decreases (Inverse Relationship)	• There is no linear relationship between the variables (No Relationship)
• R is between 0 to +1	• R is between -1 to 0	• R is approximately 0
• +1 is perfect positive correlation	• -1 is perfect Negative correlation	• No Relation
• e.g. More hrs. of studies vs Higher exam score or Higher income vs Higher spending	• e.g. More exercises vs Lower body fat or Higher temperature vs Lower ice level	• e.g. Shoe size vs Intelligence (IQ) or Day of the week vs Stock price

- ✓ Value of r lies between $-1 \leq r \leq +1$.
- ✓ If r lies between $0.7 \leq r \leq +1$, there is a strong positive linear correlation
- ✓ If r lies between $0.3 \leq r \leq 0.7$, there is a Moderate positive correlation
- ✓ If r lies between $-0.3 \leq r \leq +0.3$, there is No linear correlation
- ✓ If r lies between $-0.7 \leq r \leq -0.3$, there is a moderate Negative linear correlation
- ✓ If r lies between $-1.0 \leq r \leq -0.7$, there is a strong negative linear correlation

Assumptions:

- Both variables are quantitative (Continuous)
- Variables are approximately normally distributed
- Linear relationship between variables

Caution: * Correlation does not imply Causation.

* It means - Two variables may be correlated but one does not necessarily cause the other

Computation of (Pearson) correlation Coefficient (r)

$$R = \frac{\sum(X - \bar{X}) * (Y - \bar{Y})}{\sqrt{[\sum(X - \bar{X})^2 * \sum(Y - \bar{Y})^2]}} = \left[\frac{\sum XY - \frac{(\sum X) * (\sum Y)}{n}}{\text{SQRT of } \{[\sum X^2 - (\sum X)^2/n\} * \{ \sum Y^2 - (\sum Y)^2/n \}} \right]$$

Example:

Suresh Steel Ltd., Rourkela sends samples to M/s Sisir Laboratories for testing Hardness (X) and Tensile strength (Y) of *copper alloy casting* regularly. Find the Pearson correlation coefficient(r) of this casting and offer comments. Summarized data for 25 samples are given below –

$\sum N = 25$, $\sum X = 2147$, $\sum Y = 899.7$, $\sum XY = 77749.2$, $\sum X^2 = 185597$ & $\sum Y^2 = 32715.29$.

Therefore, $r = 77749.2 - (2147 * 899.7) / 25 / \text{SQRT of } \{185597 - (2147)^2 / 25\} * \{32715.29 - (899.7)^2\} = 0.7557$
and $r^2 = 0.5710 = 57.10 \%$

- ✓ It indicates there is a strong positive correlation between Hardness & Tensile strength which means as harness increases, tensile strength also increases.
- ✓ r^2 is called **Coefficient of determination** which explains % of variation in **Y** influenced by **X** i.e. independent variable. Thus 57% variation in Tensile strength can be explained by its Harness alone.

Correlation vs Regression

Feature	Correlation	Regression
Purpose	Measures the strength & direction of relationship between two variables.	Predicts or explains the relationship between a dependent variable & one or more independent variables.
Direction	No direction. Treats both variables symmetrically.	Has a direction. One variable (Independent) is predictor (X) and the other variable (Dependent) is the Outcome (Y).
Output	Produces a correlation coefficient. $-1 \leq r \leq +1$	Produces an equation. $Y = a + b(X)$ called a Regression line. b is called Regression coefficient.
Range	r ranges from -1 to $+1$. -1 is perfect -ve, $+1$ perfect +ve & 0 no linear correlation	No fixed range for coefficient. Slope can be any real number. r^2 ranges from 0 to 1 .
Causation	Does not imply causation.	Can be used to infer and estimate the effect of X on Y but does not produce causation.
Interpretation	Indicates how closely two variables move together.	Estimates how much the dependent variable changes when the independent variable changes.
Prediction	Cannot be used for prediction	Can be used to predict values of the dependent variable.
Symmetry	Symmetric: correlation of X with Y equals correlation of Y with X.	Not symmetric: regression of Y on X is different from regression of X on Y.
Key takeaway points	To know the strength of relationship or the direction of relationships or summarize association	To predict a value, understand the effect of variables and build a model

■ QUIZ TEST

01. In quality control, scatter diagrams are often used to
- Track production output
 - Identify cause-and-effect relationships
 - Compare employee performance
 - Show profit margins
02. Scatter diagrams typically show relationships between
- One variable
 - Two variables
 - Three variables
 - Unlimited variables
- 03) Scatter diagrams can show correlation but cannot confirm
- Strength
 - Direction
 - Causation
 - Linearity
- 04) A scatter diagram shows strong correlation between ice cream sales and drowning incidents. What does this indicate?
- True causal relationship
 - Spurious correlation due to a lurking variable
 - Perfect correlation
 - No correlation
- 05) If a scatter diagram shows a curved upward trend, which type of correlation is present?
- Linear positive correlation
 - Non-linear positive correlation
 - Linear negative correlation
 - No correlation
- 06) One extreme outlier in a scatter diagram can
- Strengthen correlation
 - Weaken or distort correlation coefficient
 - Have no effect
 - Always improve regression fit
- 07) Scatter diagram is a graphical component of
- Regression analysis
 - Control charts
 - Histogram
 - Cause & Effect diagram
- 08) A Scatter diagram represents the relationship between &
- Cause, Effect
 - Cause, Problem
 - Effect, Output
 - none of these
- 09) Scatter diagram is used to know
- Optimum possession
 - Pictorial purposes
 - compare with histogram
 - All above
- 10) In a Scatter diagram, the closeness of points to a central line indicates
- Negative correlation
 - Positive correlation
 - no correlation
 - Higher correlation
- 11) If a scatter diagram shows a curved upward trend, which type of correlation is present?
- Linear positive correlation
 - None-linear positive correlation
 - Linear negative correlation
 - No correlation
- 12) If Contribution of hours of study(X) to Marks scored(Y) is 64%, what is the Coefficient of correlation?
- 0.8%
 - 0.8%
 - 64%
 - $\pm 0.8\%$
- 13) Per acre Agricultural produce (B) is dependent on fertilizer used per acre of land (A). Coefficient of correlation is 0.90 what will be the contribution of B to A?
- 9.0%
 - 9.0%
 - 81%
 - 81%
- 14) See the below Table. Which of the statement is true.

Student	Mohan	Sohan	Rohan	Gohan	Ina	Mina	Tina
Hrs. of sleep	7.2	4.3	5.5	5.1	6.1	7.2	7.0
Grade Score	3.5	2.1	2.6	2.5	3.0	3.6	3.4

- More sleep causes a person to have a higher score
 - Higher score allows a person to get more sleep
 - Sleep & Grade score are positively correlated
 - Student, sleep & Grade score are positively correlated
- 15) Maggie made a scatter plot below to record the distances she jumped with different running start length as can be seen from Table below. What is the distance of Maggie's longest jump when she had a running start of 30 feet?

- 6.5 feet
- 9.5 feet
- 7.5 feet
- 8.0 feet

- 16) In a scatter diagram, each dot represents one student who participated in 100-meter race. Melony won the race. As per the diagram, how old is Melony?

- 10 year
- 13 year
- 14 year
- 15 year

- 17) The scatter plot below shows the average traffic volume and average vehicle speed on Agra Expressway for 50 days in 2025. Which statement below best describes the relationship between Avg. Traffic volume and Avg. vehicle speed –

- a) As traffic volume increases, vehicle speed increases
- b) As traffic volume increases, vehicle speed decreases
- c) As traffic volume increases, vehicle speed increases at first, then decreases
- d) As traffic volume increases, vehicle speed decreases at first, then increases.

- 18) Year wise population of USA is given in the diagram below. Which equation could describe the Line of Best fit here.

- a) $Y=236+5X$
- b) $Y=236-5X$
- c) $Y=236+(1/5)X$
- d) $Y=236-(1/5)X$

Please go through the Books on PST, QC Concepts & Implementation, Practical Guide book on Five S, Six sigma, Lean manufacturing and Question Bank published by QCFI, Secunderabad for more clarity.

KNOWLEDGE JUNCTION

SEVEN DIMENSIONS OF ANCIENT INDIAN WISDOM FOR ORGANIZATIONAL EXCELLENCE (A Timeless Framework for Sustainable Business Success)

Introduction

Ancient Indian civilization viewed leadership, governance, and institution-building as an integrated and interconnected system rather than a collection of isolated functions. The wisdom embedded in the *Vedas*, *Upanishads*, *Mahabharata*, *Ramayana*, and particularly *Chanakya's Arthashastra*, offers profound insights into creating resilient and enduring organizations.

In today's volatile, uncertain, complex, and rapidly evolving business environment, organizations are searching for management models that seamlessly integrate purpose, strategy, systems, technology, governance, and execution. While modern management theories provide valuable frameworks, ancient Indian thought offers a holistic perspective that remains remarkably relevant.

One such powerful paradigm is the **Seven Dimensions Framework**, comprising **Dharma**, **Shastra**, **Mantra**, **Tantra**, **Yantra**, **Sutra**, and **Karma**. Together, these seven dimensions form a comprehensive model for organizational effectiveness, operational excellence, and long-term sustainability.

The Seven Dimensions Framework at a Glance

Dimension	Organizational Interpretation	Primary Objective	Absence Leads To
Dharma	Mission & Values	Provides Purpose & Ethical Direction	Lack of Purpose
Shastra	Vision & Core Competence	Defines Strategic Direction	Lack of Direction
Mantra	Strategic Blueprint	Formulates Strategy and Priorities	Loss of Focus
Tantra	Systems & Methodologies	Establishes Structured Processes	Inconsistency
Yantra	Enablers & Infrastructure	Provides Resources and Capabilities	Reduced Capability
Sutra	Governance & Integration	Ensures Alignment & Accountability	Organizational Fragmentation
Karma	Action & Execution	Delivers Results & Continuous Improvement	Poor Performance

Relevance to Quality Management

The framework aligns naturally with modern quality philosophies:

- ✓ Dharma → Quality Policy & Organizational Values
- ✓ Shastra → Strategic Direction & Organizational Capability

- ✓ Mantra → Quality Objectives & Business Planning
- ✓ Tantra → Process Management & ISO-Based Systems
- ✓ Yantra → Infrastructure, Technology & Resources
- ✓ Sutra → Leadership, Governance & Compliance
- ✓ Karma → Operational Performance & Continual Improvement

Organizations practicing Quality Circles, Lean, Six Sigma, TPM, TQM, and ISO Management Systems can effectively use this framework as a maturity assessment and business excellence model.

The Interdependence of the Seven Dimensions

The true strength of this framework lies not in the individual dimensions but in their interdependence. A weakness in any one dimension can undermine organizational effectiveness:

- ✓ **Karma** (Action) without **Dharma** (Values) can lead to ethical failures and corporate scandals.
- ✓ **Mantra** (Strategy) without **Tantra** (Systems) often results in poor execution and missed opportunities.
- ✓ **Tantra** (Systems) without **Yantra** (Tools) creates inefficient and unscalable operations.
- ✓ **Shastra** (Knowledge) without **Karma** (Execution) remains merely an intellectual exercise.
- ✓ **Sutra** (Governance) without **Dharma** (Values) can create bureaucratic organizations lacking soul and purpose.

Sustainable excellence emerges only when all seven dimensions operate in harmony.

01. Dharma – The Foundation of Purpose and Values

Why do we exist?

In Indian philosophy, Dharma represents righteousness, duty, ethics, and moral responsibility. Within organizations, Dharma serves as the foundational purpose that transcends profit-making. *It defines the organization's mission, values, and societal contribution.*

Characteristics of Organizations with Strong Dharma

- ✓ Clear organizational purpose
- ✓ Ethical business practices
- ✓ Stakeholder trust and confidence
- ✓ Meaningful employee engagement
- ✓ Responsible corporate citizenship
- ✓ Long-term decision-making orientation

When faced with difficult choices, Dharma acts as the organization's moral compass. Decisions that may generate short-term gains but compromise long-term values are consciously avoided.

Organizational Benefits

- ✓ Strong brand reputation
- ✓ Higher employee retention
- ✓ Enhanced customer loyalty
- ✓ Greater resilience during crises
- ✓ Sustainable stakeholder relationships

Organizations that prioritize customer welfare, employee well-being, environmental stewardship, and social responsibility demonstrate Dharma in action.

02. Shastra – The North Star of Vision and Knowledge

What do we aspire to become?

The term **Shastra** signifies knowledge, science, doctrine, and wisdom. In modern organizations, Shastra represents strategic vision, domain expertise, intellectual capital, and core competencies. It provides the knowledge foundation upon which future growth is built.

Components of Shastra

- ✓ Long-term strategic vision
- ✓ Specialized domain expertise
- ✓ Organizational learning capability
- ✓ Innovation and research

- ✓ Knowledge management
- ✓ Intellectual property
- ✓ Advanced technological competence

Organizations possessing strong Shastra understand what differentiates them from competitors and continuously invest in strengthening those unique capabilities.

Strategic Significance

Shastra creates a sustainable competitive advantage—often referred to as a "corporate moat"—that enables organizations to adapt, innovate, and thrive amidst changing market dynamics.

03. Mantra – The Strategic Blueprint

How will we achieve our vision?

In ancient traditions, a Mantra is a focused expression designed to channel energy toward a specific objective. In business, Mantra represents strategy—the clear articulation of how the organization intends to win. A strong Mantra transforms vision into actionable priorities.

Elements of Strategic Mantra

- ✓ Competitive positioning
- ✓ Market selection
- ✓ Resource allocation
- ✓ Risk management
- ✓ Growth planning
- ✓ Business transformation initiatives

Strategic Approaches

Organizations may adopt various strategic mantras such as:

- ✓ Cost Leadership
- ✓ Product Differentiation
- ✓ Customer Intimacy
- ✓ Operational Excellence
- ✓ Digital Transformation
- ✓ Innovation Leadership

A well-defined Mantra ensures that everyone in the organization is aligned toward common goals, preventing fragmentation of effort and conflicting priorities.

04. Tantra – The Engine of Systems and Methodologies

How will work be performed consistently and efficiently?

If Mantra defines the "what," Tantra defines the "how."

Tantra refers to structured systems, methodologies, and operating mechanisms that convert strategy into daily operational reality.

Components of Tantra

- ✓ Business processes
- ✓ Standard operating procedures
- ✓ Workflow management
- ✓ Quality systems
- ✓ Operational methodologies
- ✓ Continuous improvement frameworks

Examples of Organizational Tantra

- ✓ ISO Management Systems
- ✓ Quality Management Systems (QMS)
- ✓ Lean Management and Poka-Yoke
- ✓ Six Sigma and 5S
- ✓ QC & Kaizen
- ✓ Total Productive Maintenance (TPM) & FMEA
- ✓ Business Process Management

Strong Tantra enables organizations to achieve consistency, predictability, scalability, and operational excellence independent of individual heroics.

05. Yantra – The Enablers of Capability

What resources enable us to perform effectively?

Yantra literally means instrument, machine, or tool. In today's business environment, it represents all resources and enablers that support execution. Yantra provides the power that drives organizational systems.

Organizational Yantras Include

- ✓ Digital technologies
- ✓ Automation systems
- ✓ Artificial Intelligence
- ✓ Infrastructure
- ✓ Manufacturing equipment
- ✓ Financial resources
- ✓ Human capital
- ✓ Data and analytics platforms

Strategic Importance

In the age of Industry 4.0, organizations increasingly compete based on the effectiveness of their Yantras. However, technology alone does not guarantee success. Yantra must remain aligned with organizational values, strategy, and systems to create meaningful business outcomes. Organizations that invest wisely in people, technology, and innovation build agility, resilience, and competitive advantage.

06. Sutra – The Thread of Governance and Integration

How do we ensure alignment, control, and accountability?

A Sutra is a thread that binds separate elements into a coherent whole. In organizations, Sutra represents governance, integration, coordination, and accountability. It ensures that all organizational functions move in the same direction.

Components of Sutra

- ✓ Leadership oversight
- ✓ Corporate governance
- ✓ Organizational policies
- ✓ Compliance management
- ✓ Risk governance
- ✓ Decision-making frameworks
- ✓ Internal audits
- ✓ Performance review systems
- ✓ Communication structures

Role of Sutra

Without effective governance, departments may optimize their individual performance while undermining overall organizational objectives. Sutra serves as the connective tissue that integrates people, processes, technology, and strategy into a unified system.

07. Karma – The Manifestation of Results

What are we actually accomplishing?

In Indian philosophy, Karma emphasizes that outcomes are the result of actions. Likewise, organizational success is determined not by intentions but by disciplined execution. Karma represents implementation, accountability, and measurable results.

Elements of Karma

- ✓ Action orientation
- ✓ Accountability
- ✓ Performance management
- ✓ Customer responsiveness
- ✓ Employee grievance resolution
- ✓ Continuous improvement
- ✓ Learning from outcomes
- ✓ Achievement of business objectives

Measuring Karma

Effective Karma is reflected through:

- ✓ Productivity improvements
- ✓ Revenue growth
- ✓ Market share gains
- ✓ Customer satisfaction
- ✓ Quality performance
- ✓ Achievement of strategic milestones

Karma is where vision becomes reality and plans become measurable achievements.

Conclusion

Ancient Wisdom for Modern Excellence

The Seven Dimensions Framework demonstrates that many principles of contemporary management were envisioned centuries ago within India's rich intellectual tradition. By integrating **Dharma** (Purpose), **Shastra** (Knowledge), **Mantra** (Strategy), **Tantra** (Systems), **Yantra** (Resources), **Sutra** (Governance), and **Karma** (Execution), organizations can create a balanced and sustainable path to excellence.

In a world characterized by complexity, disruption, and constant change, this timeless framework offers leaders a practical roadmap for building organizations that are not only profitable and innovative but also ethical, resilient, and enduring.

Organizations that successfully harmonize these seven dimensions create lasting value for customers, employees, shareholders, society, and future generations.

Even for the concepts like Quality Management, TQM, Lean, Six Sigma, TPM, Quality Circles, and Business Excellence Models; the Seven Dimensions Framework provides a uniquely Indian and globally relevant approach to achieving organizational excellence.

■ International Yoga Day 2026

International Yoga Day was celebrated with great enthusiasm across the globe, bringing together millions of people to embrace yoga's message of harmony between body, mind, and spirit.

“On this **21st of June, 2026**, India proudly celebrated *International Yoga Day* under the inspiring theme ‘**Yoga for Healthy Ageing.**’ The grand national event at **Red Road, Kolkata**, led by **Prime Minister Narendra Modi**, brought together thousands in person and millions virtually across the globe.

This year's celebrations highlighted yoga's timeless role in nurturing **mobility, resilience, emotional balance, and independence**, aligning with the WHO's **Decade of Healthy Ageing (2021–2030)**. From iconic heritage sites like the **Red Fort, Konark, Hampi, and Nalanda** to communities worldwide, yoga once again united humanity in the pursuit of health, harmony, and peace.”

The celebrations reinforced yoga's universal appeal as an ancient Indian gift to the world, fostering physical fitness, mental clarity & emotional balance in today's fast-paced life.

We all need to promote yoga as a **year-round practice**, not just one day. Also encourage adoption in **homes, schools, workplaces, and communities**.

International Yoga Day celebrated worldwide in June'26

टीचर : तुमने कभी कोई अच्छा, नेक काम किया है?

राहुल : हां सर, कल ही तो....

एक बुजुर्ग धीरे धीरे अपने घर जा रहे थे और मैंने उनके पीछे कुत्ता लगा दिया;
वो बहुत जल्दी घर पहुंच गए!

संता : यार कल शाम को भाभी तुझे इतना क्यों मार रही थी?

बंता : क्या बताऊं यार सरकारी कार्यालय में काम करते-करते मेरा भी ना दिमाग खराब हो गया है।

संता : लेकिन हुआ क्या?

बंता : यार कल अपनी गर्लफ्रेंड को लव-लेटर लिखा और प्रतिलिपि सूचनार्थ एवं आवश्यक कार्यवाही हेतु पत्नी को भी भेज दी। बस क्या था....

Husband : What is the longest word in English language?

Wife : Smiles. Because there is a mile between the first and last letters!

Ronald : Why did the soccer player take so long to eat dinner?

Donald : Because he thought he couldn't use his hands.
